

For Immediate Release

Jacques Technologies Receives LenelS2 Factory Certification Under the LenelS2 OpenAccess Alliance Program

***Jacques' IP Communication System (650 Series) interfaces with
LenelS2's OnGuard access control security system***

Brisbane, QLD – 27/04/2021 – Jacques Technologies today announced that it has received LenelS2 factory certification and joined the LenelS2™ OpenAccess Alliance Program (OAAP). Jacques' IP Communication System (650 Series) interfaces with OnGuard® access control system versions 7.5 and 7.6 to provide intercom call and alarm monitoring functionality at OnGuard workstations. Jacques Technologies completed the required factory testing at LenelS2 to validate the functionality of its interface to the OnGuard system.

“The interface passes detailed intercom call functionality including bridge call and group public address call capabilities to the OnGuard system. The detailed diagnostics provided within the alarm monitoring function allows the OnGuard system to recognise if an intercom has been tampered with or to trigger and report on the performance of Jacques' intercom self-test button,” said John Marchioli, OAAP Product Management, LenelS2. “We look forward to their continued involvement in the LenelS2 OpenAccess Alliance Program.”

“We are excited to have received LenelS2 factory certification for the interface between the Jacques IP Communication System and the OnGuard access control system. As an intercom, public address and help point manufacturing company this integration with the OnGuard system will be well received by our customers,” states Erik Jansson, Managing Director of Jacques Technologies.

About Jacques Technologies

Jacques Technologies is a market leader in innovation, technological design, and development of integrated communication solutions. Designed, engineered and manufactured in Australia. Our core competencies are in combining IP technology with decades of experience in audio and video products to produce flexible intercom, emergency, information help point and public address systems.
